Faculty of Agricultural Business

The objectives of research were 1) to study personal, economic and social characteristics of people living in Ban Rum-Poeng, Tambon Suthep, Amphur Muang, Chiang mai; 2) to find out their cooperation in forest fire protection; and 3) to identify problems in and obstacles levels to their forest fire protection cooperation. The data were collected during January 1-31, 2000, by means of interview schedules from 171 household heads in Ban Rum-Poeng and analyzed by using the Statistical Package for Social Science (SPSS/fw). The findings were as follows:

1. Most of the respondents were male, married, 45 years old on average, and had completed compulsory education (Pratom 4). They were labor employees with an average income of 84,933 Baht and average land holding of 0.5 rai
Most of the respondents cooperated in forest fire protection at a lowest level as they worked for wages and did not gain any benefit from forest.

Most of the respondents had a moderate level of problems and obstacles concerning cooperation in forest fire protection as they were labor employees with small incomes; they were not paid for participation in forest fire protection activities. In addition, forest fire protection staff were transferring forest fire as well as coordination.
